

金属輸送体の発現調節を介した カドミウムによる血管内皮細胞の 毒性発現機構

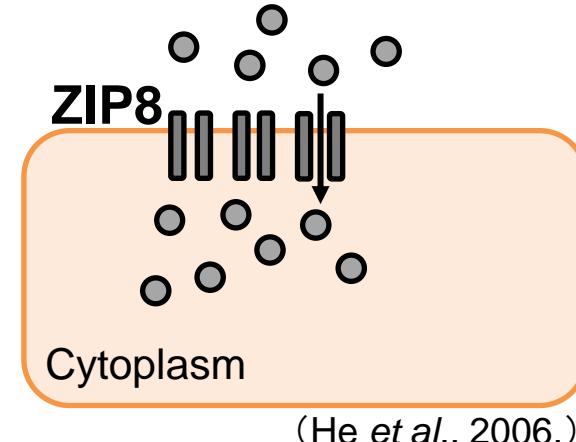

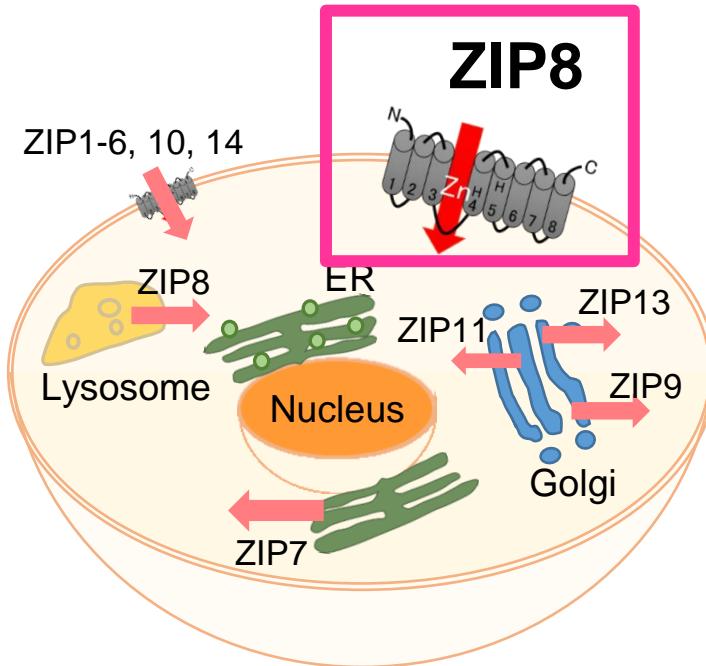

研究背景

カドミウムは動脈硬化症を基盤とする病態のリスク要因

ZIP metal transporter

● Metal ion : **Cadmium**, zinc, manganese

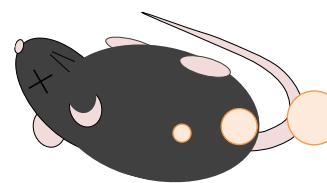

(He et al., 2006.)

Cadmium exposure
→

Cadmium high sensitivity mouse

ZIP8 expression ↑
Cadmium uptake ↑

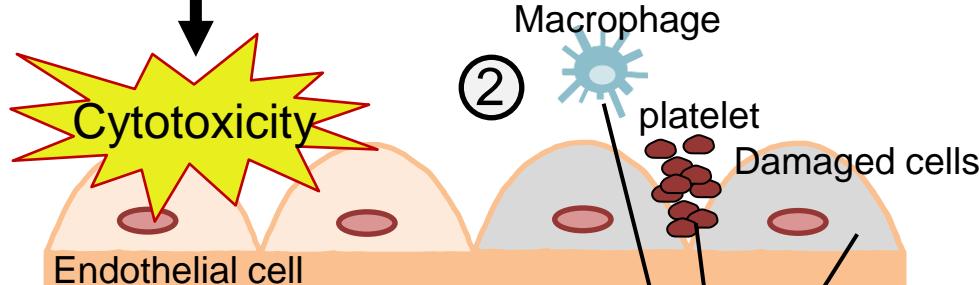

精巢血管内皮細胞
(Dalton et al., 2005.)

カドミウムによる内皮細胞毒性には、ZIP8の発現が重要

総括

① Cadmium Exposure

ZIP8 induction
via JNK and NF- κ B signaling

Cadmium Exposure

ZIP8 induction
via JNK and NF- κ B signaling
